DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-48 and 53-57, drawn to creating a nucleic acid using a primer, classified in class 435, subclass 91.2.
 - II. Claim 49, drawn to a nucleic acid, classified in class 536, subclass 23.1, for example.
 - III. Claims 50-52, drawn to a proteinaceous composition, classified in class 530, subclass 350, for example.

2. The inventions are distinct, each from the other because of the following reasons:

A) Inventions I and (II and III) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the nucleic acid of Group II can be made by another and materially different process (e.g. by using a vector). The proteinaceous composition of Group III can also be made by another and materially different process (e.g. enzymatic hydrolysis).

B) Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are a nucleic acid (i.e. Invention II) and a proteinaceous composition (i.e.

Art Unit: 1637

Invention III), which are two different chemical entities having differing biochemical structures, modes of operation, functions, and effects. Invention II would require searching in areas unrelated to proteinaceous compositions, and as such, would require an undue burden on the examiner if not restricted.

3. Because these inventions are distinct for the reasons given above and have acquired a different status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I-III require different searches that are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
